Friction Factor determines if there is normal or abnormal behavior in the price action of the stock when compared to the buying vs. selling trading statistics. It calculates number of net shares of buying or selling to move price +/- one cent.

Here is how to understand Friction Factor:

1. **If Friction Factor is positive, more buying than selling caused SDOT’s price to rise**
2. **If Friction Factor is negative, more selling than buying caused SDOT’s price to fall**
3. **If Friction Factor is 0, there was no discernible activity either way**
4. **If Friction Factor is abnormal, it means that there is either a bearish bias or a bullish bias to how market makers are making market in your stock.**
